

**Record of Discussion about  
TESTING AND STORAGE OF GENETIC MATERIAL  
Targeted confirmatory germline testing for  
specific cancer variants**

I have discussed genetic testing with my healthcare professional and I understand that:

1. The results of my test may be important for my family. They could be shared with my family through a discussion with me, or in a way that I am not personally identified.
  
2. I understand that this test is looking just for the specific genetic variant(s) previously identified in my family and/or cancer and does not look for other genetic variants which can be associated with inherited cancers.
  
3. My DNA sample will be stored after testing is complete. My DNA might be used for genetic tests for my family or other people.
  
4. My genetic data will be stored to allow for future investigations.
  
5. Whether or not genetic tests need to be declared for insurance purposes depends on the type of genetic test being undertaken. Insurance companies may ask for results of a “diagnostic” genetic test to confirm why a person has developed cancer. They currently may not ask for results of a “predictive” genetic test which looks at the chance of an unaffected person developing cancer in the future. I should seek specialized advice if I am concerned about insurance implications of a genetic test.  
Further information about genetics tests and insurance is available at: <https://www.abi.org.uk/data-and-resources/tools-and-resources/genetics/>
  
6. The results of my test will be part of my patient health record.
  
7. My anonymised DNA sample (meaning my personal identity cannot be linked to the sample) may be used in ethically-approved research projects, for quality control and for the development of new tests, in order to help improve our understanding of cancer.

Note of other specific issues discussed (*e.g. referral to particular research programmes*):

<b>I agree to genetic/genomic investigations*</b>	DATE _____
